React-IoT

Apr 3, 2025 4 Mins read Senior REACT Developer   IoT Platform We are looking for a Senior REACT Developer   IoT Platform to join our team. Joining us, you will have a chance to work with our proactive and talented people, and you will have a chance to work directly with our clients from North America, Singapore, Japan, Korea, and Australia. Why WATA TECH? Work with young and talented engineers with great teamwork. Proud of producing software applications that millions of people are using every day. A longterm project with top clients in the world. Very attractive salary and annual salary review. Opportunity for working overseas. Job Description: Act as the Technical Lead for frontend development, defining and executing the UI/UX architecture and roadmap. Design, develop, and maintain the Reactbased interface for highly interactive lowcode tools. Collaborate with backend engineers to integrate APIs and ensure a seamless experience between the Rust backend and React frontend. Develop complex graphical user interfaces, including draganddrop features, realtime updates, and intuitive workflows. Optimize performance for speed, responsiveness, and scalability across different devices and screen sizes. Implement robust CI/CD automation pipelines to streamline development, testing, and deployment. Stay up to date with the latest React and frontend development trends, ensuring best practices are followed. Job Requirements: 8+ years of software development experience, with at least 4 years specializing in REACT for B2B applications. Strong expertise in JavaScript/TypeScript, React, and componentbased architecture. Experience with highly interactive graphical interfaces, such as lowcode platforms, dashboards, or data visualization tools. Proven experience working with RESTful and WebSocket APIs. Handson experience in CI/CD automation for frontend applications. Deep understanding of frontend performance optimization, accessibility, and best UI/UX practices. Excellent problemsolving skills, proactive mindset, and the ability to take initiative. Excellent communication skills in English to effectively lead and collaborate in a remote, crossfunctional environment. Nice to Have: Knowledge of WebAssembly (WASM) and integrating Rust with frontend applications. Experience with DomainDriven Design principles. Knowledge of Semantic Technologies, such as SPARQL and OWL2. Benefits: Competitive salary package 5 working days per week (MondayFriday), to some extent flexible working hours. Friendly, professional and open working environment. Opportunities to improve English skills within an international team English is an official language. Skills up plan with Tech talk, soft skill talk, English club, working process training.
