Golang-Developer

Apr 22, 2025 4 Mins read Golang Developer (Healthcare project) We are looking for a Golang Developer to join our team. Joining us, you will have a chance to work with our proactive and talented people, and you will have a chance to work directly with our clients from North America, Singapore, Japan, Korea, and Australia. Why WATA TECH? Work with young and talented engineers with great teamwork. Proud of producing software applications that millions of people are using every day. A longterm project with top clients in the world. Very attractive salary and annual salary review. Opportunity for working overseas. Job Description: Collaborate closely with your Product Manager to gain a deep understanding of project requirements and feature specifications. Design, develop, deploy, and maintain backend services and frameworks for building microservices. Effectively manage individual project priorities, meet deadlines, and deliver highquality results. Enhance engineer productivity by developing and maintaining shared libraries. Offer robust, scalable technical solutions to address feature requirements. Assume full ownership of your service, leading its development and maintenance, while actively engaging with the team. Cultivate a strong team spirit by being a collaborative, openminded, and supportive team player. Identify and fix bugs to ensure smooth operation of services. Drive technical innovation and improvements within the team. Identify and address technical debt to maintain code quality and performance. Job Requirements: A minimum of 3 years of experience in PHP or a strong ability to quickly adapt to it. Proficiency in designing and implementing APIs and backend services, utilizing various relational and NoSQL databases. Understanding of CI/CD practices, Docker containers, and Kubernetes. Solid knowledge of data structures and algorithms. Familiarity with communication protocols like gRPC, RESTful, and GraphQL. Proficiency with code versioning tools, such as Git/Gitlab. Exposure to at least two data systems, including but not limited to Postgres, MongoDB, MySQL, Elasticsearch, Redis, Kafka, and TimescaleDB. Familiarity with fundamental design principles for creating scalable applications. Nicetohave Qualifications Knowledge of user authentication and authorization mechanisms across multiple systems, servers, and environments. Familiarity with Golang or an open mindset and ability to switch to Golang quickly. Basic understanding of frontend technologies, including JavaScript, HTML5, and CSS3. Experience with Microservices architecture and eventdriven systems. Experience in benchmarking and performance optimization to ensure efficient and responsive services. Experience implementing trace logs, monitoring systems with Grafana, and utilizing ELK (Elasticsearch, Logstash, Kibana) for log management. Additional Skills (Desirable) Proficiency in writing unit tests and integration tests to ensure the reliability and correctness of backend services. Benefits: Competitive salary package 5 working days per week (MondayFriday), to some extent flexible working hours. Friendly, professional and open working environment. Opportunities to improve English skills within an international team   English is an official language. Skills up plan with Tech talk, soft skill talk, English club, working process training.
