Automation-Tester

Apr 3, 2025 4 Mins read Automation Tester We are looking for a Automation Tester to join our team. Joining us, you will have a chance to work with our proactive and talented people, and you will have a chance to work directly with our clients from North America, Singapore, Japan, Korea, and Australia. Why WATA TECH? Work with young and talented engineers with great teamwork. Proud of producing software applications that millions of people are using every day. A longterm project with top clients in the world. Very attractive salary and annual salary review. Opportunity for working overseas. Job Description: Design, develop, and maintain automated test frameworks for web applications (frontend and backend). Work closely with developers and product teams to understand requirements and define test strategies. Write and execute test cases, test scripts, and automation suites to ensure software reliability and quality. Perform API testing using tools like Postman, REST Assured, or similar frameworks. Implement CI/CDintegrated automated testing to catch issues early in the development lifecycle. Conduct functional, regression, performance, and security testing as needed. Identify, track, and report bugs and defects, ensuring timely resolution with developers. Drive QA best practices in the team, including testdriven development (TDD) and behaviordriven development (BDD) approaches. Utilize AIpowered testing tools where applicable to improve efficiency in test case generation, automation, and debugging. Follow SCRUM and Agile methodologies, actively participating in standups, sprint planning, and retrospectives. Job Requirements: 3+ years of experience in software testing, with at least 2 years in test automation. Strong experience in automation testing frameworks such as Selenium, Cypress, or Playwright. Handson experience with API testing using tools like Postman, REST Assured, or similar frameworks. Experience writing test scripts in Python or JavaScript. Should be proficient in reading and writing English, and able to speak to a reasonable extent to ensure smooth daytoday communication. Familiarity with CI/CD pipelines, integrating automated tests into development workflows. Strong understanding of test case design, bug tracking, and reporting. Experience in crossbrowser and mobile testing. Comfortable in a fastpaced, Agile startup environment. Willingness to learn, adapt, and collaborate closely with developers. Open to using AIpowered tools for test automation, debugging, and quality assurance. NicetoHave (Preferred Skills) Experience working in B2B SaaS applications, testing multitenant architectures and rolebased access control (RBAC). Knowledge of performance testing tools (e.g., JMeter, k6). Experience with security testing tools (e.g., OWASP ZAP, Burp Suite). Familiarity with DevOps and containerized testing environments (Docker, Kubernetes). Understanding of observability & monitoring tools (Datadog, Sentry, Prometheus) to assist in troubleshooting production issues. Benefits: Competitive salary package 5 working days per week (MondayFriday), to some extent flexible working hours. Friendly, professional and open working environment. Opportunities to improve English skills within an international team   English is an official language. Skills up plan with Tech talk, soft skill talk, English club, working process training.
